

EUROLUB KÜHLERSCHUTZ D-40 SUPER

Description

COOLANT PROTECT D-40 SUPER is a nitrite-, amine-, phosphate- and borate-free coolant based on ethylene glycol (ethanediol; monoethylene glycol). It contains a package of inhibitors based on silicate and salts of organic acids (Si-OAT).

KÜHLERSCHUTZ D-40 SUPER must be diluted with water before use.

KÜHLERSCHUTZ D-40 SUPER provides excellent protection against frost, rust and overheating for all modern engines, particularly high-performance aluminium engines.

It effectively prevents corrosion and deposits in the cooling system and its key components, such as the cooling channels in the cylinder head, engine block, radiator and water pump.

As the specific benefits of Coolant Protection D-40 SUPER are only achieved when used on its own, mixing it with other coolants is not recommended.

COOLANT PROTECT D-40 SUPER should be mixed with water (clean, not overly hard water should be used to prepare the coolant) before being added to the cooling circuit and used at a concentration of 35 to 55% by volume.

Advantage: Suitable for:

(Backward compatible with coolant antifreeze fluids to specifications VW TL 774-G (G12++), VW TL 774-F (G12+) and VW TL 774-C (G11).)

When completely changing the coolant, EUROLUB Coolant Protection D-40 SUPER can also be used as a replacement product where 'G13' is specified.

Can be used with

VW TL 774 Ausf. G
