

EBS

Socket

51305257 | 51305259

The rubber-coated surface of the contact insert results in an even higher leak tightness on the socket from the contact side. The rubber presses on the contact pins, which prevents water penetration in the rear section of the socket.

Important installation information: The GGVS/ADR requirements stipulate the use of conductor end sleeves for screw contacts. For this reason, the enclosed conductor end sleeves must be connected to the stripped wires before installing the conductors.
