TOOL BAG CARE AND MAINTENANCE INSTRUCTIONS

Tool bag for professional use

- Use only a warm cleaning cloth to clean your tool bag. Do not use acids, alkaline, bleach or harsh detergents.
- Inspections are undertaken prior to use. Check the tool bag for signs of damage. Normal wear and tear over time can reduce the strength of the straps due to abrasion cuts, prolonged exposure to sunlight can possibly reduce the strength and compromise not only your safety but the safety of others.
- Do not overload the bag.
- Always ensure all tools are secured in the bag before lifting, walking or any transportation of the bag. Ensure all flaps, pockets, buckles and zippers are closed before lifting the bag.
- Avoid placing the bag in contact with extreme heat or naked flame as the materials may melt and deform or damage your bag.
